TEJAS MORE

AI Engineer | LLM Systems, RAG & Agents

tejasmore464@gmail.com | *linkedin.com/in/tejasmore09* | *github.com/TejasMore09* | *Portfolio*

PROFESSIONAL SUMMARY

AI engineer who likes automating workflows and taking repetitive work off people's plates, without taking the human out of decisions that matter. I build LLM systems that verify their own output: RAG with source-quoted answers, evidence-checked fraud detection, and agents that wait for approval on high-risk actions. Shipped three full-stack systems solo on FastAPI, PostgreSQL and Next.js.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, SQL, TypeScript

AI/ML: LLMs, RAG, Hybrid Retrieval (vector + full-text, RRF), Embeddings, Agentic AI, LLM Evaluation, Prompt Engineering, NLP

AI Tooling: Gemini API, LiteLLM, Sentence Transformers, scikit-learn

Core CS & Design: DSA, OOP, Low-Level Design (LLD)

Frameworks & Libraries: FastAPI, Next.js, React, SQLAlchemy

Databases: PostgreSQL, pgvector, MySQL, MongoDB, ChromaDB

Tools & Platforms: Git, GitHub Actions, Docker, CI/CD, Linux

EDUCATION

TransStadia Institute, Mumbai University — Mumbai, India

Bachelor of Science - Artificial Intelligence & Sports Analytics *CGPA : 9.71* — Aug 2023 - Jul 2026

PROJECTS

Aether - Adaptive AI Monitoring and Decision System *Website* | *Case Study* — Nov 2025 - Present

- Built a monitoring agent that tracks an SME's receivables, cash runway, payables, inventory and customer risk, with a cost-aware decision engine: code decides only when expected loss outweighs the cost of acting, the LLM only explains, and high-risk actions wait for human approval.
- Enforced multi-tenant isolation with PostgreSQL row-level security under a non-owner app role (no app-layer filtering), verified in CI against real Postgres; integrated Xero via OAuth 2.0 + PKCE with encrypted token rotation.
- Shipped 3 FastAPI services and 2 Next.js apps solo; removed Temporal (held 63 of 96 Postgres connections) in favour of cron scheduling, and verified a 2m11s full-stack rollback.

Technologies: *Python, FastAPI, PostgreSQL (RLS, pgvector), LiteLLM, Gemini API, Next.js, TypeScript, Docker, GitHub Actions*

DarkHorse AI - Anti-Fraud Detection Platform *Website* | *Case Study* — Mar 2026 - Present

- Built and deployed a scam detection platform that fuses six signals (sender authentication, domain age, lookalike domains, link reputation, attachments, LLM persuasion analysis) across text, email, screenshots (OCR + QR) and voice notes.
- Eliminated fabricated LLM evidence with a verbatim span-verification guard, and made every signal report "unavailable" rather than a silent pass; both enforced as CI failures.
- Tuned for precision so the tool doesn't cry wolf: 1.36% false-positive rate on a frozen, fingerprinted 718-message holdout; cut lookalike-domain false positives from 12.0% to 0.19% across 1,607 real domains by measuring and replacing a naive rule.

Technologies: *Python, FastAPI, PostgreSQL, Next.js, TypeScript, Gemini API, Tesseract OCR, Docker, GitHub Actions*

Fintrust - Regulatory Intelligence for Indian Finance *Website* | *Case Study* — Apr 2026 - Present

- Built and deployed a RAG assistant that explains 7 RBI/SEBI regulations (267 pages) in plain English for advisers and NBFCs, using hybrid retrieval (pgvector + full-text search, reciprocal rank fusion) in a single PostgreSQL query.
- Designed a hallucination guard that requires every LLM statement to quote the regulator; code locates the quote and stores its character span, withholding anything unverified (177 of 179 statements verified).
- Built a Gemini extraction pipeline that pulls obligations from circulars (82 of 90 kept after validation) and converts them into deadlines with deterministic code instead of trusting the model with dates.

Technologies: *Python, FastAPI, PostgreSQL, pgvector, Gemini API, Next.js, TypeScript, pytest, GitHub Actions*

EXPERIENCE

AI & ML Intern | Elevate Labs — Remote | Apr 2025 - May 2025

Built a music genre classifier on Librosa audio features with TensorFlow and scikit-learn, covering preprocessing, training and evaluation.

DevOps Intern | Elevate Labs — Remote | May 2025 - Jun 2025

Containerized project applications with Docker and built Jenkins CI/CD pipelines to automate builds and deployments.

CERTIFICATES

Machine Learning Specialization | *DeepLearning.AI* *Certificate*

Data Structures and Algorithms | Apna College *Certificate*

Object Oriented Programming | *TakeUForward - Striver* *Certificate*
